EPDM Granule Size: 1-4mm

DELUXE SYNTHETIC SOFTFALL

Deluxe Synthetic Softfall

EPDM Granules (Ethylene Propylene Diene Monomer) have always been regarded as the ultimate surface. Our Deluxe Surfacing offers full colour integrity and allows the provision of radical colour changes within a surface – ideal for inserts or patterning.

Alternatively by blending the Deluxe granule colours within a surface, vibrant themes can be created offering bright surfaces with low maintenance. Rubbertech Deluxe Surfacing has a strong, resistant yet supple surface finish.

Where colour changes are specified, all joints are fastened vertically and horizontally through our unique step down jointing method, developed specifically for EPDM feature installations.

Wet Pour – is an 'on site' installation process.

The *Wet Pour Surface* offers seamless surfacing with a semi-porous finish, eliminating any pooling of surface water.

Colour feature inserts can be added to make a more profound statement and to add 'life' to your surface, allowing the softfall to become a play feature in its own right. In fact our team can provide a full 3D surfacing environment by creating waves, mounds and other features as part of the surface.

Be sure to ask your Playscape Creations Consultant about inserts and stencils.

Cushion

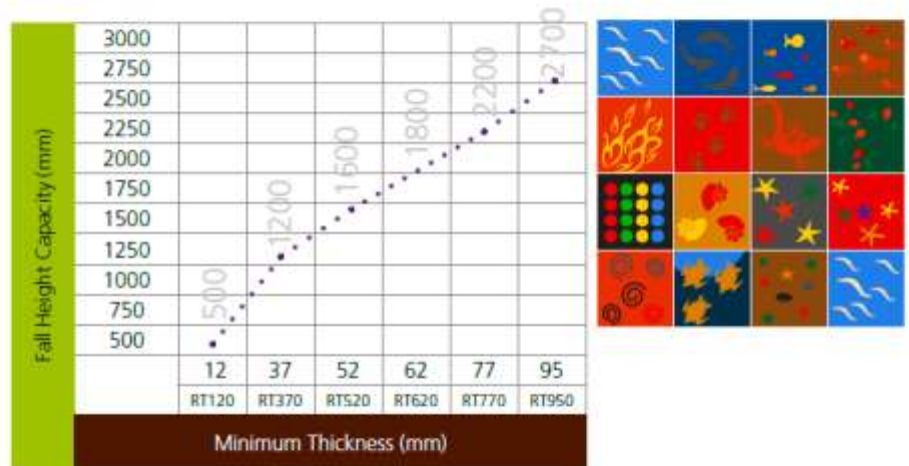

Due to the nature of playgrounds and playground equipment, we have had independent testing performed on our product so that we can offer a softfall which will provide adequate protection for given Free Heights of Fall.

Using only recycled rubber mixed proportionately with pre-polymer, our cushion offers lasting protection with smooth transitions between thicknesses.

Our surfacing systems can be installed in a range of thicknesses to cater for the differing fall heights as shown below:

All Rubbertech Softfall has been rigorously tested to exceed the current Australian Standard AS/NZS4422-1996. Rubbertech Softfall surfacing has been developed to offer poured on-site 'Safety Cushion' at precise thicknesses to meet your relevant free height of fall, with a variety of top coats to suit every application.

It is imperative that all Rubbertech Softfall systems are installed over a compacted or solid base. Ask your Playscape Creations consultant about adequate base preparation for your installation.

Rubbertech™ CLASSIC SYNTHETIC SOFTFALL

Classic Synthetic Softfall

Pre-coated SBR (recycled car tyre) rubber is a cost effective way to provide long lasting coloured surfacing. Available in Granule, each component is coated in a polymer based coloured pigment offering a durable, colourfast surface.

Wet Pour – is an 'on site' installation process

The *Wet Pour Surface* offers seamless surfacing with a semi-porous finish, eliminating any pooling of surface water.

Colour feature inserts can be added to make a more profound statement and to add 'life' to your surface, allowing the softfall to become a play feature in its own right. In fact our team can provide a full 3D surfacing environment by creating waves, mounds and other features as part of the surface.
