

## PLAYSCAPE CREATIONS' AQUATICS DIVISION

Playscape Creations has a ten year history in delivering aquatic playgrounds, sometimes referred to as splash pads or spraygrounds, with some great projects to which we can lay claim – most recently Keppel Kraken at Yeppoon, and the Splash N Play at Providence, Ripley SEQ. With increased demand for these types of facilities among property developers, councils, and commercial operators we proudly announce the establishment of our **“Aquatic” Division**, with a totally new product line to complement our design and construction capability.

Our long term manufacturing partners, Landscape Structures, recently released their Aquatix brand after acquiring the established firm ARC (Aquatic Recreation Company) and then investing heavily in product development and re-branding. With a range of unique water features and sprays offering a complete line up of modern interactive components never seen before in the Australian market, we are excited to be involved with this innovative manufacturer. The Aquatix range has a host of new features such as the Verso Splash and Water Limbo, offering cool aquatic activity with architectural aesthetics. The take up has been strong with 3 projects already under construction across the country, all set to open when the weather warms up later this year.

Leading the charge with our new division is **Mr Shane Vardy as the Project Development Manager**. Shane is no stranger to Playscape Creations having been instrumental as a playground consult with our company from 2009 to 2014. “The transition into the Aquatic portfolio with Playscape Creations is an exciting progression for me” stated Shane when asked about his new role, “it is a great career move for me allowing all my skills in previous roles come together – my background in fabrication and construction, as well as over 10 years in commercial design and sales consultation is perfect for this technical project development position”. Shane joins Nick Veraart (Mechanical Engineer) and Peter Koch (Industrial Designer) in the “Aquatic” division, providing a strong skill set across all facets of design and construction, promising smiles on many faces at completion of our projects.
